DETAILED ACTION

Information Disclosure Statement

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 4-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 4 and 9, lines 2-17, the section "in which the condenser lens is not larger..." is not clear. The following section perhaps better states the intent of the applicant:

--

in which the distance of dispersion of incident light on the condenser lens in the longitudinal direction of the light receiving face of the line sensor is not larger than that in the direction perpendicular to the longitudinal direction of the light receiving face of the line sensor as measured on the light receiving face of the line sensor.

--

In claim 5, last paragraph, the upper left hand quadrant of the formula is unclear. Does it indicate "one millimeter" or "length" or something else?

In claim 5, last paragraph, lines 5-7, the term "the wavelength difference between the longest wavelength and the shortest wavelength of the incident light components on the condenser lens" is unclear since it is not clear whether "incident light" components include reflected stimulating light, stimulated light, or both.

Allowable Subject Matter

Claims 1-3 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: Claim 1 includes limitations that a stimuable phosphor readout apparatus comprises a condenser lens with chromatic aberration which guides stimulating light away from a sensor.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ogura, U. S. Patent No. 5,396,081 describes a radiation image readout apparatus comprising a condenser lens with chromatic aberration (col. 3, lines 50-66).
